

## UPR Oil Catch Can hose assembly

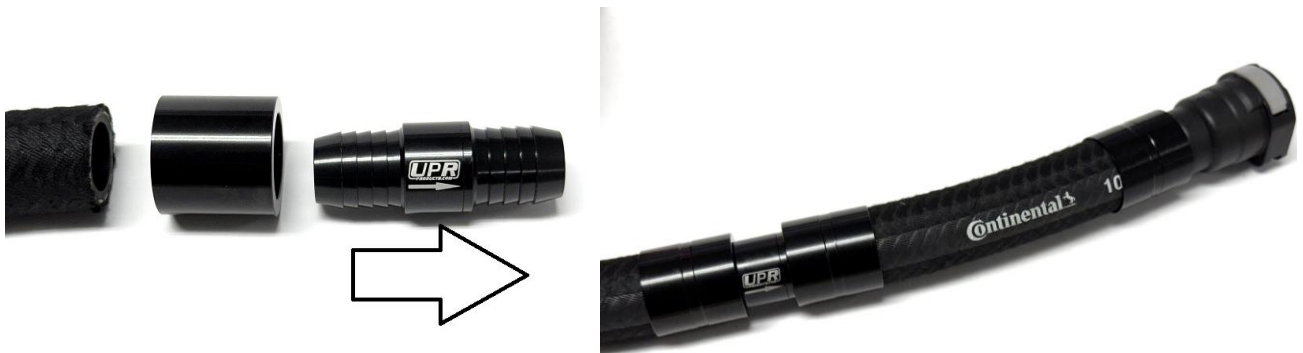

Once the hose is cut to length, slide the UPR Billet Hose End Ferrule onto the hose.

Push the Hose End Fitting into the hose until it is flush with the Hose End Ferrule

When installing check valves, be sure to note the direction of flow. UPR check valves have arrows printed on them. **The arrow always faces AWAY from the catch can** when installed in the vacuum hose.

Install the appropriate fitting into the engine side of the hose assembly to complete the installation.

---

To remove and service the catch can, press the buttons on the fittings to release them from the catch can (**NEVER pry or remove the buttons from the fittings**), Unscrew the quick release mounting knob, and remove the catch can. Unscrew the catch can cup to dispose of the liquid. Clean the catch can cup, body and filter with warm water and dish soap as needed. Vehicles using E85 will need to have the tank cleaned and serviced more often than vehicles using gasoline.
