

S.S. Fuel Door Cover Install

Tools/Supplies:

Clean rag or paper towels, rubbing alcohol, black automotive silicone

Parts:

(1) Fuel Door Cover

Estimated Time:

15 Minutes

1. Begin by cleaning the surface area of the fuel door on your car with the rubbing alcohol.
2. Turn the fuel door cover over so the bottom is facing up (this is the exposed side with no protective film on it, the film side is the top of the fuel door cover) and apply black silicone.
3. Next turn the fuel door cover over and carefully place onto fuel door, making sure bend is lined up properly.
4. Once in place, you can remove the white plastic film on the top of the fuel door cover. See cleaning instructions below.

Cleaning Instructions:

The finish on these parts is so fine that it is important to be very careful when cleaning these plates. Use only a clean soft towel or a Viva Kleenex **TM** type paper towel along with glass cleaner.
