

UPR Oil Catch Can Installation

5030-135-CSS, 5030-135-1-CSS 2015-2017 Mustang GT VMP / ROUSH / FRPP Catch Can Instructions

1. Remove the plastic radiator cover if equipped by removing the push pins that secure it. Use a flat screw driver or knife to gently pry up on the center portion of the pin. Once the pin is removed, the cover will come off.

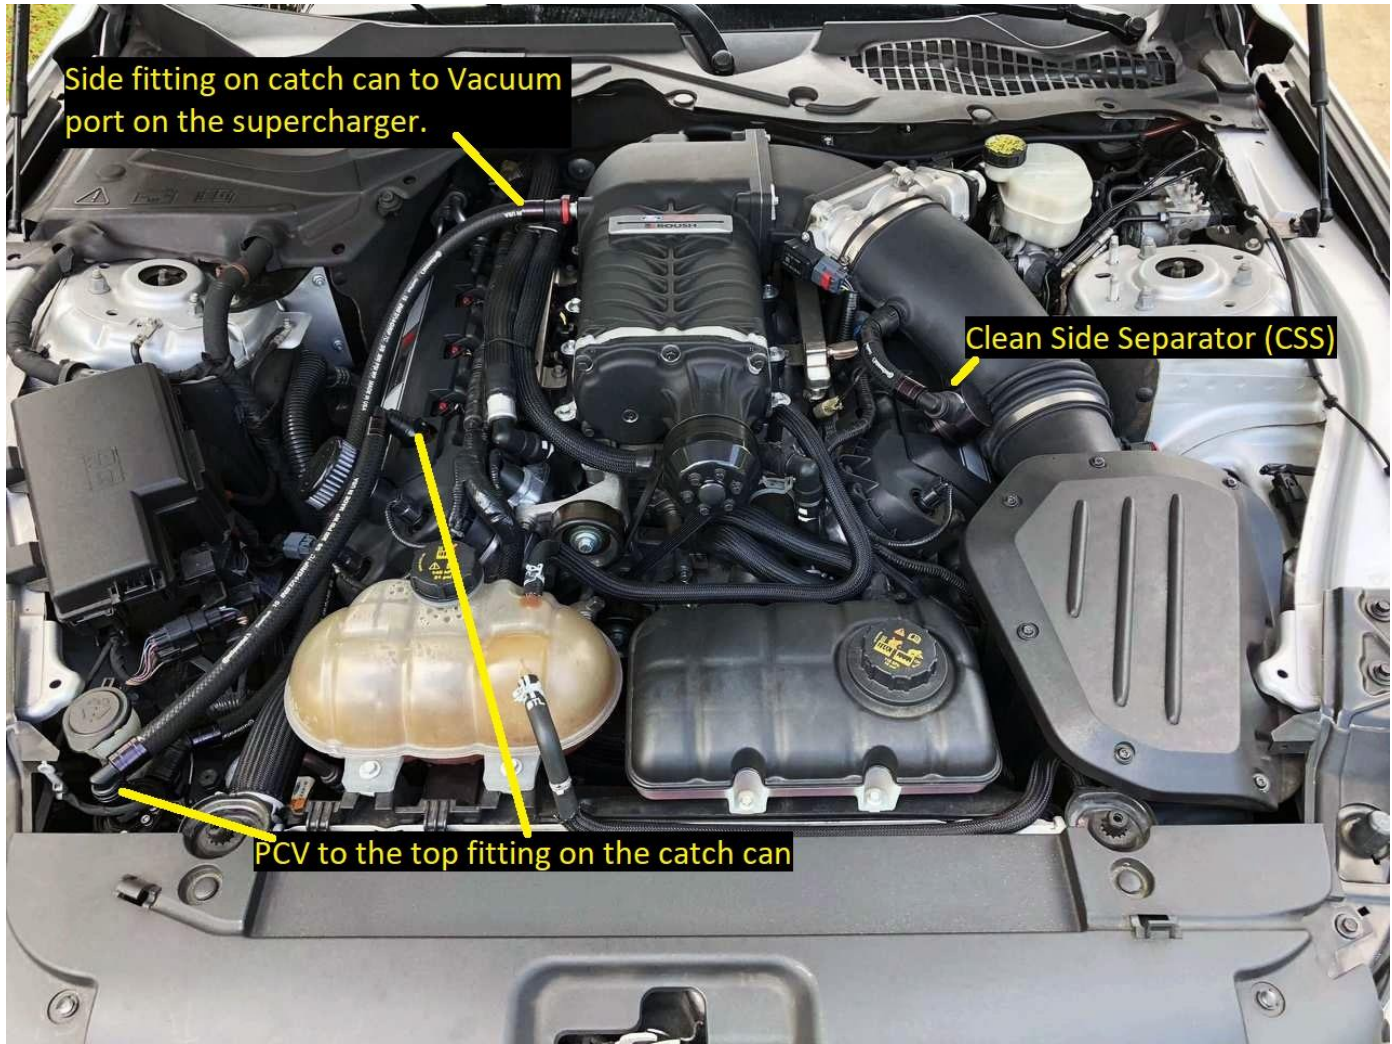

2. Use a 10mm socket and ratchet to remove the factory silver bolt and washer pictured. This is where you will be installing your UPR fender mount catch can bracket. Install the bracket and tighten it so that it is oriented with the stud facing up as shown.

3. Locate the PCV hose that runs from the passenger valve cover PCV valve to the Supercharger vacuum port. Remove the factory fittings by pushing the grey or green buttons on the fittings and lift the hose off. This hose will also have a 'T' fitting with a connection going around to the back of the supercharger. Remove the clamp securing the fitting and install the provided barbed plug into the hose. Secure the hose along the injector harness with a zip tie.

4. The Hose with NO CHECK VALVE will connect from the passenger side valve cover PCV fitting to the top of the catch can.

5. The hose WITH THE CHECK VALVE connects from the fitting on the side of the can to the supercharger vacuum port. The ARROW printed on the check valve always FACES AWAY FROM THE CATCH CAN.
6. Install the Clean Side Separator (CSS) onto the driver side valve cover fitting by lifting up on the collar at the base, and then pushing down on the CSS. The collar will click when fully engaged. Connect the

Always check and drain the catch can more often in winter / freezing weather. If the water/oil mixture in the catch can is allowed to freeze it will cause damage to the catch can and internal components. Any damage due to freezing is NOT WARRANTY. You must dispose of the liquid collected in the catch can properly (with used waste oil) properly according to your local laws.
