

2017 F150 3.5L Ecoboost & Raptor PLUG N PLAY™ Dual Valve Catch Can Installation

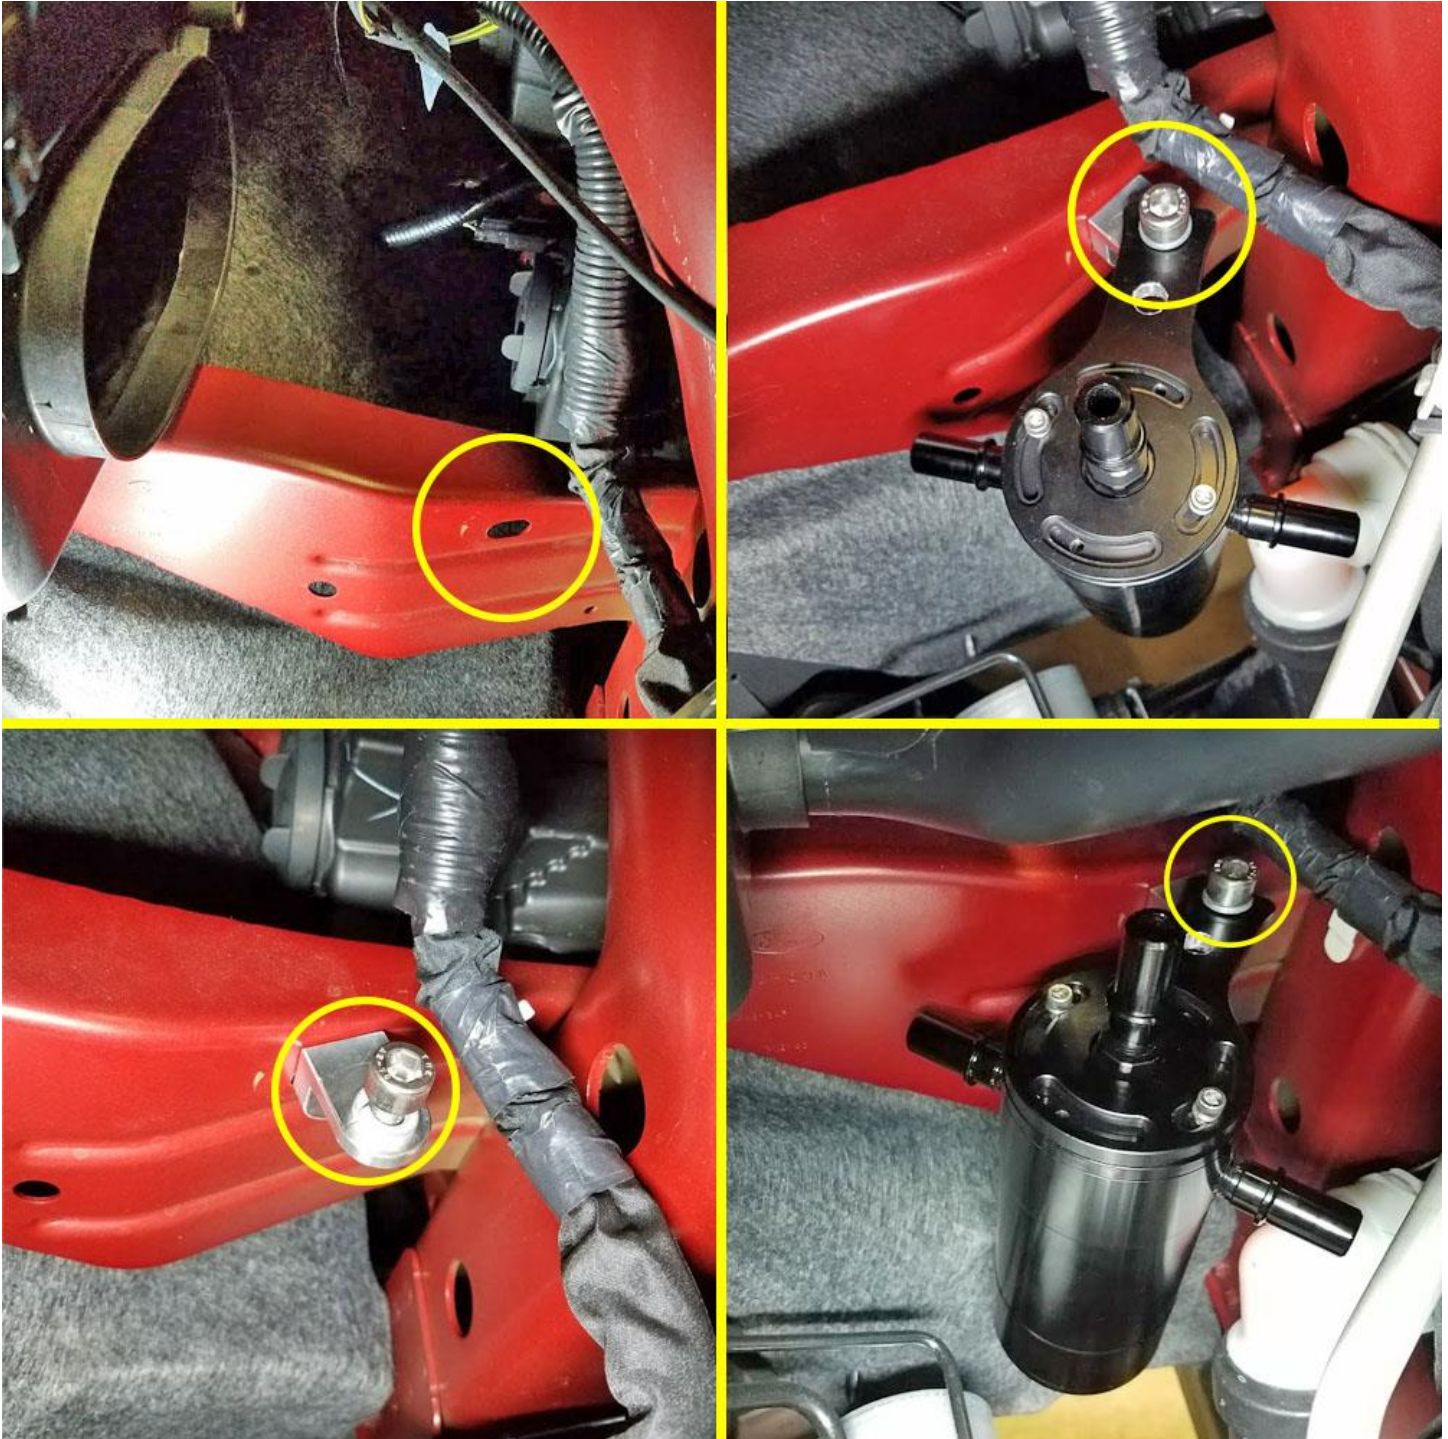

The UPR Dual Valve Catch Can and UPR Clean Side Separator Installation Steps:

1. Remove the 2pcs push pins and the 1pc bolt that hold the air inlet attached to the factory air box and turn and pull to remove the inlet from the airbox.
2. Remove the nuts from the factory engine cover and remove.
3. Locate the oval shaped hole in the frame right next to the light directly below the air inlet.
4. Install the mounting bracket to the frame with the bracket facing upwards.
5. Now you can install the catch can with the supplied 10mm bolt to the mounting bracket.
6. Do not tighten the catch can all the way so you can install the Plug n Play™ fittings.
7. The dirty line goes on the top with no check valve and then you run it to the PCV on the passenger side valve cover.
8. The clean line goes on the front with the check valve arrow facing away from the catch can and then you run it to the manifold connection.
9. The WOT line goes on the rear with the check valve arrow facing away from the catch can and then you run it to the far side of the inlet tube where you drill and install it.
10. To drill and install the WOT line fitting you will need a 5/16" drill bit and to go 1" down and 1" over from the rib in picture. The location is just a guideline and not critical.
11. You'll will need to remove the tube and drill and shake out any plastic left from drilling.
12. Now you can install the supplied grommet and Plug n Play™ Fitting and reinstall pipe.
13. After installing the inlet pipe you can now connect the WOT line.
14. Reinstall the factory air inlet and bolt it back in and then install both push pins.
