

UPR Oil Catch Can

5049-042 UPR Oil Separator Plug n Play Compatible with 07-21 Tundra 5.7, 08-22 Sequoia 5.7 Installation

Remove the engine cover if equipped by pulling up on it. Locate PCV hose on front of intake manifold, It will run from the intake manifold to the PCV valve which is below the intake manifold. On some models, you will need to remove some of the factory foam insulation to access the PCV valve / hose. Remove the factory PCV hose.

The smaller diameter hose in the kit will connect to the PCV below the intake manifold. You can apply some clean engine oil to the inside of the hose to help installation. Slide the UPR billet hose end onto the hose, then install the hose onto the PCV.

Install the other hose in the kit onto the intake manifold vacuum fitting.

Reinstall the engine cover.

Remove 10mm bolt from the top driver side of the radiator fan shroud. Install UPR catch can bracket and reinstall bolt. For 2021-22 trucks, use the supplied spacer and hardware.

Install the hoses onto the catch can.

To check the catch can, unscrew the catch can cup from the catch can body. Always dispose of the liquid with your used oil according to local laws and regulations. Reinstall the cup. Do not overtighten the cup. Snug will do. Overtightening the cup can cause damage to the O ring or threads.

Always check and drain the catch can more often in winter / freezing weather. If the water/oil mixture in the catch can is allowed to freeze it will cause damage to the catch can and internal components. Any damage due to freezing is NOT WARRANTY. You must dispose of the liquid collected in the catch can properly (with used waste oil) properly according to your local laws.
