

H5032-49 UPR Oil Catch Can Drain Line Kit Installation

The UPR Oil Catch Can Drain Line Kit comes with the hose, fittings, and drain valve needed to make emptying your catch can super easy!

Depending on your application, choose the straight or 90-degree fitting for the base of the catch can and thread it in. Be sure to apply thread sealant tape or paste as needed.

Slide the UPR Billet hose end cover over the end of the hose and push it onto the barbed fitting. Route the hose so that the drain valve would be in a convenient location and trim the hose to length. Install the billet hose end then drain valve, and secure the hose as needed.
